Bio-Diversity Policy

Biodiversity means the total variety of all living things. Biodiversity is the natural capital which supports all of our lives and is a key measure of the health of the planet.

All areas of the Stormking operation will have some impact on biodiversity; the way in which the company carries out such functions as purchasing, production, site management and transportation, all have an effect.

Policy

It is the policy of Stormking to:

- Make an annual assessment of the impacts that its operations have on biodiversity.
- Include a consideration of the impacts on biodiversity in investment decisions.
- Aim to implement a purchasing policy that favors products and services and suppliers that have the least impact on biodiversity.

In addition, Stormking will seek to:

- Encourage similar standards and principles towards biodiversity conservation from all third parties involved with the business.
- Engage with the local community and other stakeholders as far as reasonably practicable in connection with biodiversity conservation.
